FileMaker Server 11.0v2 Updater

Software Description

This software updates version 11.0v1 of FileMaker® Server (For Central Europe, the Middle East and India version) to 11.0v2. You can see the version number of your current installation on the FileMaker Server 11 Admin Console Start Page.

Updater Details

New in FileMaker Server 11.0.2

1. Installer/Updater

- FileMaker Server 11.0v2 will install an updated version of Java 6 Update 20 on all Windows platforms
- FileMaker Server 11.0v2 will install Bonjour 2.0 on all Windows platforms

2. Database Server

- Addressed an issue in CLI where command “fmsadmin restart server” doesn’t restart the server
- Addressed an issue in open remote dialog where files were sometimes displayed slowly when using the Guest account on a FileMaker Server with both external authentication and file display filtering enabled
- Addressed an issue where a corrupt database sometimes crashes FileMaker Server during consistency check on open
- Addressed an issue where FileMaker Server sometimes would quit when FileMaker Pro client opens a database that refers to other databases that FileMaker Server is still in the process of opening
- Addressed an issue on Windows where clients cannot connect to the Database Server that has just started, and the Database Server can't be stopped because it has hung when registering a custom host name on the network
- Addressed an issue where Database Server becomes unresponsive on performing a search that has over 16KB in a global field
- Addressed an issue where a FileMaker Pro client user receives a license key conflict accessing an IWP solution hosted on a remote FileMaker Server when an IWP client running in the same machine as Pro client accesses the same IWP solution
- Addressed an issue where FileMaker Server could shut down when multiple clients entered into a thread contention, which resulted in disconnected clients appearing in the clients view due to a timing issue

3. Recovery

- Addressed an issue where the FileMaker Server consistency check failed to detect damaged access privileges

4. Admin Console

- Addressed an issue on Mac OS X where the Admin Console stops updating statistics (or admin server becomes disconnected) if left on the statistics panel for some time period
- Addressed an issue where you can access the Admin Console via the desktop direct link even if your IP address is not in the allowed IP addresses field under General settings > Admin Console
- Addressed a timeout issue where the Schedule Assistant returned an error when trying to look up FileMaker script names in a hosted database

5. PHP

- Addressed an issue in PHP Site Assistant where a find request on a layout containing multi-line text area with no data from a search page (findrecords.php) will return no records
- Addressed an issue on Windows where user's current PHP engine is replaced with FileMaker supported PHP engine during deployment even when you opt to use your own PHP engine in deployment assistant
- Addressed an issue where FileMaker Server will change the PHP engine configured by user to use FileMaker bundled PHP engine without redeployment, on editing and saving Web Publishing > PHP settings

6. xDBC

- Addressed an issue on Mac OS X where ODBC DSN configuration dialog crashes when testing connection if advanced language was set with "wide" API and UTF-8
- Addressed an issue where FileMaker xDBC listener cannot be restarted
- Addressed an issue where the FileMaker xDBC listener doesn't flush previous TCP connection and it cannot be restarted

Who should install this software?

Install this software if you are using any of the configurations listed below.

Platform	Product	Version	Use this Updater	Languages
Mac OS X	FileMaker Server 11 FileMaker Server 11 Advanced	11.0.1.92	fms_11v2_mac_updater.dmg	English French
Windows	FileMaker Server 11 FileMaker Server 11 Advanced	11.0.1.92	fms_11v2_win_updater.exe	English French

Installation Instructions (Windows 7, Windows 2003 Server, Windows 2008 Server & 2008 Server R2)

To ensure a smooth installation, disable virus detection software before applying the update, and re-enable it after you are finished. You may be prompted to insert your original installation CD or locate the original installation software during the update process.

1. Disconnect all clients and close all files.
2. In the FileMaker Server Admin Console, stop Web Publishing and the Database Server.
3. Quit the FileMaker Server Admin Console, the Start Page and PHP Site Assistant if they are running.
4. In the Windows Services Console, select Services (Local).
5. Select the FileMaker Server service, then choose Action menu > Stop.

Install the new software

1. Double-click Setup.exe. (**Note:** Please do not run FileMakerServer11v2Update.msp).
2. Read the license agreement. If you agree to the terms. Click "Update", and then proceed as directed. After the update has completed, you will see a message confirming the successful installation of the new version.
3. Click "Finish" to quit the updater when completed.
4. Open the FileMaker Server 11 Admin Console Start Page.
5. Under Software Update, the Current Installed Version should now read 11.0.2.217.

Installation Instructions (Mac OS X 10.5.x and 10.6.x)

To ensure a smooth installation, disable virus detection software before applying the update, and re-enable it after you are finished.

Before applying the update

1. Disconnect all clients and close all files.
2. In the FileMaker Server Admin Console, stop Web Publishing and the Database Server.
3. Quit the FileMaker Server Admin Console, the Start Page and PHP Site Assistant if they are running.

Install the new software

1. Double-click the FileMaker Server 11 v2 updater.
2. Read the license agreement. If you agree to the terms. Click "Update", and then proceed as directed. After the update has completed, you will see a message confirming the successful installation of the new version.
3. Quit the updater when completed.
4. Open the FileMaker Server 11 Admin Console Start Page.
5. Under Software Update, the Current Installed Version should now read 11.0.2.217.

If the update does not complete successfully, reinstall the full version of FileMaker Server 11.0v1 using your original installation program, then run the FileMaker Server 11.0v2 Update again. If you are still unable to successfully update to FileMaker Server 11.0v2, contact FileMaker Technical Support for assistance.

APIs, Technologies, or Features to Be Deprecated

As FileMaker Server evolves, the list of APIs and technologies it encompasses may change. As part of this evolution, less efficient interfaces may be deprecated in favor of newer ones.

Note: Deprecation does not mean the immediate deletion of an API or technology. However, FileMaker recommends that you migrate your solution to use other APIs, technologies, or alternative features of the product to meet the same need in your solutions, because the deprecated interfaces may be deleted from a future version of the application.
